City Council, concessionaires and companies coordinate their interventions on public roads

City Council, concessionaires and companies coordinate their interventions on public roads. Planning things we save on investment and discomfort is limited to neighbors

The Councilor for Public Space and Works, José Ramón González de Zárate, today has held a working meeting with municipal technicians, concessionary companies and representatives of Gas Natural and Iberdrola with the purpose of coordinating the actions on the public roads of the next months.

This type of meetings began during the last municipal administration, giving "very good results", said González de Zárate, who has highlighted the savings in investment and the reduction "to the minimum expression" of the inconvenience to citizens. "If we have to work in a street - he defends - because we have to change the drinking water pipes, and Iberdrola plans to act in the area within four months, we coordinate so that the inconvenience to the neighbors is the least possible. "

In today's meeting the actions on public roads that will affect Benidorm until 2020 have been put on the table.
